A TIME FOR ROUTINES

Anna Gavin
September 2024

There is no season I love more than Fall. It's not just the crisp air or the warm smells. It's the return to school and routine. Everyone (myself included) gets a little bit of summer brain. It's nice for a while, but by the end of August I am craving the return of my routines and schedules.

Routines are something most of us crave – it is part of what makes us human. There are many health benefits to routines. They help you manage stress more effectively which can then help with

lowering your risk for things like heart disease.

Routines also help with your sleep with bedtime habits and more consistent wake times allowing us to get better rest – which we all know leads to better moods. And by having routines for groceries, meal prep and exercise can all lead to a healthier lifestyle in general.

I feel this the most in fall when we return to school schedules and shorter days.

"I say bring on the pumpkin lattes and school schedules!"

New to the Team

Join us in welcoming all of our new Fireline employees. Lots of new faces to learn, so take note!

SMALL BUT MIGHTY: Monitoring Team Spotlight

A team of three – the Monitoring Department is Fireline’s smallest department. But don’t let their size fool you – they really pack a punch. Currently the monitoring team manages 2,174 accounts, onboarding new sites every day.

What is Monitoring?

Monitoring is the process used to allow fire alarm signals to be transmitted to an Underwriters Laboratory (UL) Listed Central Station. A central station receives signals from the system and alerts the fire department and key property management personnel.

Get to know the Team

Ted Richter,
Department Supervisor

Angelo Santos,
Monitoring Specialist

Ryan Malloy,
Monitoring Department
Administrator

Ted and Angelo:

1. What panel manufacturer is your favorite and why? Which is your least favorite?

Ted: Notifier panels are my favorite because they are user-friendly and easy to work on. My least favorite is Simplex because they are proprietary systems I am not as familiar with.

Angelo: For the fact that it's user-friendly, I would have to say currently Potter. My least favorite would have to be Silent Knight.

2. What's your worst horror story when setting up monitoring?

Ted: My worst horror story when setting up monitoring would have to be doing maintenance on the antennas at the office. I am afraid of heights and being up that high outside is a lot different than going on someone's roof to install an antenna.

Angelo: installing radio equipment Ted and I were in the middle of a shooting and got stuck in the crime scene for a few hours. J. Van Story Branch

3. Do you prefer cell or radio monitoring?

Ted: Cellular and radio equipment have many benefits for monitoring. I prefer radio because with radio monitoring, we don't have to rely on cellular carriers and their equipment to transmit customer signals to central station.

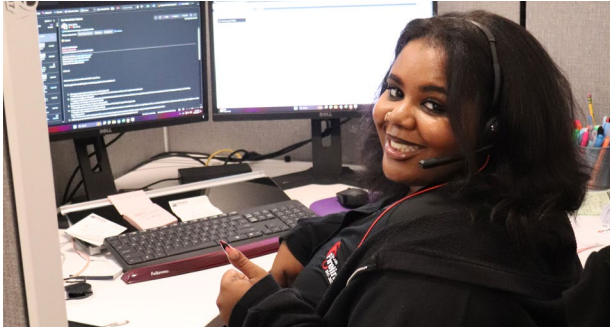

Angelo: I would have to say cell, because it allows us to monitor a wide range of customers in our region. Both have their own unique capabilities.

4. Why do we have so many issues with old phone communicators? How do you explain this to customers in the field so they can understand?

Ted: Fire alarm control panels communicate in beeps and tones. Phone lines provided from the phone company are digital for voice over IP. Phone company's no longer install true pots, copper analog phone lines. Compatible phone lines for fire alarm communication are at this point obsolete. My understanding is newly installed phone lines operates at such a high speed, The beeps and tones from the fire alarm panel are often missed or misunderstood by the receiver, beeps and tones can be lost in the high speed transmission, causing communication issues.

Angelo: Plain Old Telephone Service (POTS) infrastructure in many places are aging. POTS lines are being replaced with digital lines, which do not provide the right amount of voltage required for the fire alarm panel causing telco troubles on the system. Fireline solution is to get away from the timelines and go wireless with a Cellular Dialer.

5. What is your biggest challenge when setting up a new customer?

Ted: My biggest challenge when setting up a new customer is the age of the fire alarm system. The older the fire alarm system, the more likely that the communication format cannot be transmitted wirelessly through the wireless communicator. Wireless communication is best suited for contact ID or Sia communication formats. Newer equipment and receivers have trouble understanding older communication formats. This also applies to rotary and touch tone dialing. Older panels will dial out using rotary dialing, and this cannot be understood by wireless communicators. All fire alarm systems utilizing wireless communication needs to be set for touch tone dialing.

Angelo: For me personally it's only when there's no room on the wall or cabinet where the fire alarm control panel located.

6. Who are your go-to people at Fireline and why?

Ted: This is a hard question to answer. There isn't anyone at Fireline unwilling to help if there's an issue that needs to be resolved. I have worked at Fireline for over nine years now and when there's something I cannot handle or understand there's always someone that can help. From field technicians to office personnel, Fireline is a team. I feel at this point I've received assistance from nearly everyone that works at Fireline, and depending on the situation would depend on who I would normally go to. I've always considered my phone to be the best tool I have.

Angelo: Ted & Ryan, we are a team!

Ryan:

1. What do you like about working in the monitoring team?

Ryan: I LOVE working with my techs, they are my go-to's, we're all close and they make my job so much easier

2. What are the biggest challenges?

Ryan: Trying to translate/communicate the super detailed technical information over to customers in a way that is easy for them to understand without it being extremely overwhelming.

Sometimes even trying to understand it myself.

3. What are the most common customer calls you get?

Ryan: Placing the system on test, walking through fire drills, and walking through silencing panels

4. Who are your go-to people at the office and why?

Ryan: Gary Cox- he's simply goated. He's there whenever I need him for whatever I need him for, whether everything is on fire, or I need to bully him for a dopamine rush: Like a good neighbor or state farm, Gary is there

And Tori- Tori does so much to make the office such a welcoming place to be, she's so helpful, sweet, and just brings the absolute best vibes !

5. What do you want the folks at Fireline to know about monitoring and the monitoring department?

Ryan: We have an APP ! All Fireline employees have access to the Affiliated App and Portal that is easily accessible via the app store or through a web browser!

It's extremely easy to use and we also have a version called "SeeMyAlarm" for our monitoring customers.

If anyone is interested or has any questions/issues I am more than happy to help.

STEVE IMHOFF CELEBRATES 50 YEARS

July 22nd 2024 marked the 50th anniversary of Steve Imhoff. This major accomplishment has only been reached by two other Fireline employees, Fireline founder John Waters Sr. in 1997 and the beloved Phil Bowers in 2016.

According to Steve, his hiring requirement was to lift a 100lb bag of sodium bicarbonate. Once he accomplished that his Fireline career began.

Steve has had many roles at Fireline in his 50 years here and has steadfastly supported the Portables department though many of those years whether working with Wade Dillow or later with Phil Bowers. Moving from the old shop (known as the salt mines) into the field as a portables driver, Steve spent the next 26 years in the field expanding his knowledge of Baltimore and seeing all sorts of companies and facilities along the way. In fact, according to his recent podcast (Fire Away Podcast – available on all major podcast platforms), Steve even serviced extinguishers in the room where the atom was first split at Johns Hopkins. What a part of history!

Because of his tenure here, Steve is one of the only employees still around that has worked for all three generations of Fireline owners since his time at the company predated even Steve Waters. It was

around his 8th year at the company when Steve Waters took over as President. Steve and Steve developed a strong relationship of mutual respect as their careers evolved together here.

It was this relationship that led Steve to his next chapter at Fireline when in the early 2000's he was asked to take over supervision of the warehouse. Steve even assisted with the design and layout of the new warehouse that was developed in 2005, much of which remains today. After running the warehouse for several years, Steve was back to his roots working with Phil in the portables department, managing the customer service, scheduling and supervision of the field techs.

About 10 years ago we knew that Fireline wanted to improve our contractor sales with fire extinguishers and cabinets by dedicating a full time resource to the job. Steve once again was up for the challenge and spent much of those early years doing what he does best, building relationships. It was a natural fit. He worked closely with both contractors and vendors to improve contractor sales.

Steve – congratulations on 50 years at Fireline, a truly great accomplishment.

Nate English

FROM A CUSTOMER

Hi Anna,

I was the PM for Midpoint that started the AV portion of your office buildout. I am now in a different role with the company, and I just wanted to reach out to you and let you know how extremely happy I am with the service I received from your Fire Alarm divisions' technician that was sent out to our HQ today. His first name was Nate (I didn't catch his last name) and he was extremely knowledgeable and went WAY above and beyond what I would have thought would have been great service.

He was tenacious in finding and solving the problem that led to the fire alarm going off and the fire dept. being called to our office. I think probably 99 out of 100 hundred people would have given up in trying to find the duct smoke detector we were trying to find but he was like Sherlock Holmes and found it despite me giving him errant information. I even had him in the wrong building lol. I think you are lucky to have him as part of your team and I certainly am glad you do!

Mike Ramiro, John Parker, and Jeff Dyer

FROM A CUSTOMER

I would like to share a HUGE shout out of praise to Fireline techs Mike Ramiro, John Parker, and Jeff Dyer for repairing these critical assets, staying persistent when different approaches needed to be evaluated, and for getting it done with great attitudes.

Due to their hard work, perseverance and leveraging their combined experiences, the only hydrants left to get a handle on are two dry barrel hydrants. One being repaired through a subcontractor and the other pending responses from the North Fuel farm construction crew.

Kudos!

Howard Gross

FROM A CUSTOMER

Several Months back I was having issues with my Main Fire Alarm Panel . Fireline sent Technician Howard Gross out. Howard spent some time checking everything out and found several screws / terminals that had been stripped and soldered them which corrected my issue . Howard recommended to replace the Mian Fire Alarm Panel of 14 years. I was so impressed with Howard I took him at his word. I submitted to the Capital Budget group to replace the panel as Howard explained it. I was approved for the funds. Bill set everything up for the installation and believe

it or not your office sent out Howard. My stress went away when I saw Howard. Howard throughout the day keep us all updated. Howard explained many different things. By late in the day Howard had the system up and fully running. I was surprised and Thankful. Everything was installed, tested and working great. Howard even did the Elevator recalls system that was just completed by Fireline earlier that month. We all went home stress free.

The next Morning I believe Jeff came out to complete the testing and making sure everything was working as it should have. I believe that Jeff was surprised at everything Howard had completed. Jeff spoke to Howard and all was great. Jeff finished his testing and so forth and left. The team effort went greatly.

I wanted to point out that I would have never replaced that fire alarm panel without the information from Howard . I was relieved that the installation went so well . What great experience once again with Fireline Team.

Garret Radke and Makenzie Woodward

FROM A CO-WORKER

This is impressive to read! While I'm not surprised based on recent conversations with Garrett about his future, Garrett you did an outstanding job with the entire process. Great customer service, communication with the team and exhausting all efforts to get this coordinated and completed!

And Makenzie, well thank you for working with Garrett and your assistance with this.

Kudos!

Ryan Malloy
FROM A CUSTOMER

I am writing to extend my heartfelt gratitude for your exceptional assistance in scheduling an emergency appointment with Fireline to recharge our 32 fire extinguishers. As a large shopping center, maintaining compliance with fire codes is of the utmost importance, and your prompt support was invaluable to us.

After experiencing multiple rescheduling and cancellations from our previous service provider, your ability to coordinate and secure a timely appointment with Fireline was greatly appreciated. Your dedication to customer service and commitment to our account truly stand out.

Your impeccable handling of our situation not only ensured we remained compliant with fire safety regulations but also alleviated a significant amount of stress. Your professionalism and efficiency in addressing our urgent needs have left a lasting impression, and we are grateful for your exceptional service.

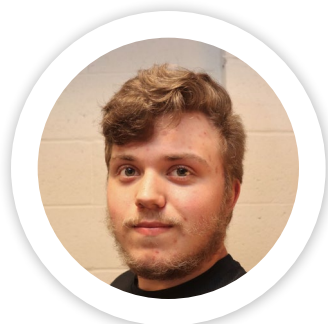

Thank you once again for your outstanding support. We look forward to continuing our partnership and will certainly recommend your services to others.

Ryan Malloy and Angelo Santos
FROM A CUSTOMER

Ryan in monitoring was extremely kind and very helpful in passing my issues on and helping to resolve them... And Angelo is a great guy, by the way!hydrants. One being repaired through a subcontractor and the other pending responses from the North Fuel farm construction crew.

Kudos!

Cameron Justice, Joey Gunther, Juan Esperanza, Rob Stallings, Logan Stegall, and Marcus Turks

FROM A CO-WORKER

We recently obtained a new contract with the Library of Congress in DC. Once the paperwork was signed, they wanted to start night work the following week. Cameron Justice and Joey Gunther were the first 2 to volunteer to get things started. They ran into many obstacles due to escort issues and just the sheer size of the buildings. A few weeks later the customer wanted us to return to the site to complete the work. It was decided that 2 crews were needed to be more efficient. Juan Esperanza, Rob Stallings, Logan Stegall, and Marcus Turks all volunteered to help. I want to give a shout out to all of these guys. This was not an easy job but everyone had good spirits and did what was needed. I want to thank all of them for their commitment to Fireline.

Ryan Malloy

FROM A CO-WORKER

Kudos to Ryan!

Being kind and having the patience to listen and diffuse a situation with an upset customers can be challenging. Thank you Ryan ☺

Kudos!

Rich Sigethy, Eric Robertson, Nick Copsey, and Tony Kellner

FROM A CO-WORKER

I want to thank everyone involved for their part in taking care of the service call at our customer site and exceeding the customer expectations of offering to wait until tomorrow.

Rich received the call and made me aware. We worked together to get technicians on site today and having the right parts to complete the repair. Eric assisted with parts and sending the system program, which saved the technicians a lot of time. And then we have Nick Copsey, what can I say. Nick happened to be working just north of Frederick and responded quickly to my email about this call. Without hesitation, Nick offered to at least get eyes on the situation and get the information needed for the repair.

Hoping to get the repair completed today, another email was sent to the service technicians looking for a volunteer to pick up the parts and deliver to Nick. And within a couple minutes, Tony Kellner calls me.

Tony with the parts, Nick with the software made it happen today! Thanks to everyone, we were able to get resolved today and avoid rearranging tomorrow's schedule, and demonstrated our commitment to customer service.

Garrett Radke and Nick Johnson

FROM A CO-WORKER

I need to send out some KUDOS to Garrett and Nick.

The job was to change out 9 Sprinkler Painted Sprinkler Heads. In an occupied and working Kitchen at lunch time. (This was the best and only time to perform this work per the customer.) Garrett and Nick had to deal with them cooking, plus the Baltimore County Fire Marshal and JCAHO Healthcare. Jim Foster (POC) gave them a lot of respect for being so clean and very professional to his kitchen staff.

Fireline Merch on Vacation

Fireline Merch on Vacation

NIFAD Conference

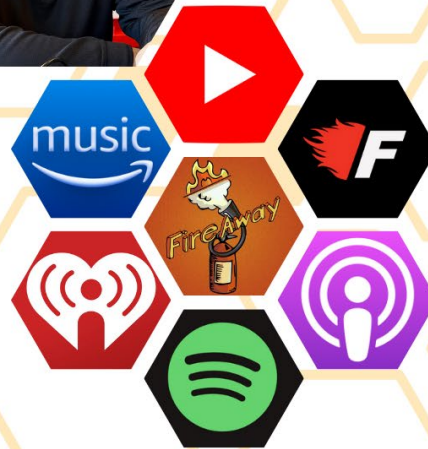

This year Fireline once again attended the National Independent Fire Alarm Distributors (NIFAD) conference in Las Vegas, NV. Attending were Frank Chenoweth, Gary Cox and Rich Sigethy, with Rich serving his last year as the association's President. The three day conference included member best practice discussions followed by a panel of expert hosted by Rich Sigethy that included Larry Rietz from Jensen Hughes, William Koffel from Koffel and Associates, Justin Daniels from CCFS and Rodger Reiswig from Johnson Controls.

NO MORE Servers!

For those who may not know, getting “in the cloud” is one of the best ways to protect a company from ransomware attacks and other cyber security concerns. This means moving all files and programs into a cloud based server.

Fireline is officially 100% in the cloud – no more on premise servers that are high risk. This process began 3 years ago and took a great deal of time and hard work to make happen. Thanks to Ken Barnhart, Mike Sirak and our IT partners at Hartman Executive Advisors – Dan Levett, Ron Manzo, and Ronnie Kurlander.

To celebrate – we decided to do an homage to the classic film Office Space.

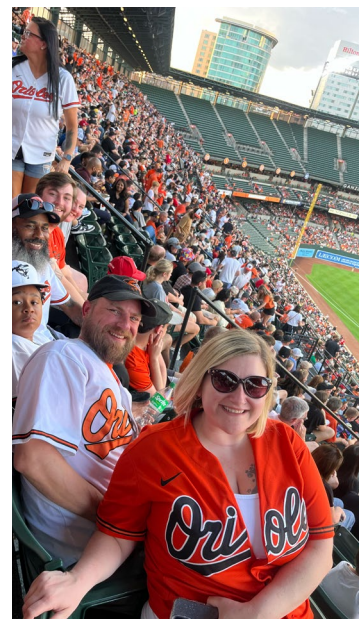

Check it out here and enjoy!

Let's Go O's!

Tuesday August 13th Fireline employees and their friends and family went out to cheer on the O's in the Battle of the Beltway with the Washington Nationals. It was one of those magically cool evenings we were fortunate enough to get in August. A great night with great company. If only we could have snagged a win!
